

# The Hole Story

*News from the honing industry leader*

## In-house honing boosts profitability and part quality

To be profitable in today's business environment, manufacturing must focus on productivity, efficiency and the ability to make high-quality parts with reduced lead times. Each step in the process that can be performed in-house improves profitability, and that includes bore sizing and finishing.

Sunnen Products Company brings consistent, high-precision honing within the budget of job shops, repair facilities and manufacturers of all sizes. Adding a Sunnen honing system to your in-house machine tool mix will improve your parts quality, reduce scrap and increase efficiency.

There is a model for every price range and production requirement, from the manually operated model [MBB-1660](#), to the mid-level [SSH-1680](#) and [SH-2000](#) power-stroked models, to the next generation, PLC-controlled [SH-4000](#), and the new [SV-15](#) and [SV-25](#) cylinder hones. Consistent bore size, surface finish, and improved roundness and straightness are all available now at the push of a button. Your delivery times will also improve as outsourced part processing is eliminated, saving costs and increasing customer satisfaction.

Sunnen even offers [Equipment Financing](#), and you can buy with confidence, as every Sunnen hone is backed by an industry-leading 3-year warranty.

Your Sunnen sales and application engineer will help get you up and running with training and support. You don't have to be a big shop to share in the benefits of the latest honing technology. Contact your Sunnen sales and applications engineer at 800-325-3670 to see how you can put a Sunnen honing machine to work for you, and watch your business grow.
